

Don't trust your big jobs to just anyone. Let the company with the experience and equipment necessary to handle the job take the pressure off of you. Magnum Mud Equipment Co., Inc. has a vast amount of experience in rig-up and testing of flowback systems and is the only company with enough equipment to handle the large jobs. Our experience has led us to build and test a new 8-way manifold system to assist with multi-tank jobs. When planning your next flowback, call the company you can count on to get your job done right.
